AI Internal Knowledge

Powered by Synthetix

synthetix

Eliminate knowledge silos within your organisation. Synthetix Internal Knowledge makes it easy for new hires to find information, bring teams together to collaborate on ideas, support employees and boost training by means of a secure, intelligent AI-powered, centralised knowledge-base.

Knowledge-base software for internal use

Strictly for internal use, a centralised knowledge-base is an ideal way for companies to enable employees to find important information easily and quickly. Synthetix Internal Knowledge-base provides superb resilience, performance, and security, ensuring there is no risk of sharing private or sensitive information with the general public.

Intelligent AI-driven Synthetix Internal Knowledge-base can help to streamline communication across teams, saving time and energy.

Key features

Purpose built for private/internal use

Synthetix Internal Knowledge-base makes it easy for employees across an organisation to create and share knowledge, files and documents simply and effectively. The intuitive centralised knowledge-base enables team members to find information instantly, searching by typing naturally worded questions.

Super-quick answers through superior Natural Language Processing

database checked on every key press. Four layers of sophisticated linguistic search technology ensures the best and most popular search results appear first. Share critical information such a know-hows, online manuals, product docs and more.

Seamless collaboration and creation

Built for employees on both sides of an interaction, internal messaging and employee collaboration features deliver incredible team efficiencies. A user friendly editor interface enable different teams to create content. Contributions can be managed by controlling access with role-based permissions within the internal knowledge-base, granting view-only access or reserving editorial access for specific roles and to prevent overwriting. Single sign-on options make it simple and easy to maintain users.

Detailed reports and analytics

Keep track of all your employees interactions with comprehensive built-in tools for reporting and administration. Quickly track contribution history and workflows. Identify which knowledge assets employees are accessing frequently, potentially alerting employers to gaps in knowledge or topics or issues of concern.
